Maximize Your York Experience.

Pathway to Master of Management (MMgt) Program: Science + Business

Acquire four years of specialized knowledge in your Science program. Then gain management expertise to maximise your opportunities for post-graduation success.

The Schulich School of Business and York Faculty of Science have partnered to offer a program for high achieving students that provides workshops, networking activities, and guest talks for students who want to explore the option of applying their science degree to a management career.

Why enrol in the Pathway Program?
Whether you plan to start your career immediately after your science degree or plan on applying to a professional or graduate program, the Pathway to the Master of Management (MMgt) Program lets you explore the benefits of a management degree in an informed manner. While you earn your Bachelor of Science (B. Sc.) degree, students gain entry to Schulich engagement events specifically tailored for Pathway to the Master of Management (MMgt) Program participants.

MMgt Curriculum Highlights
A valuable next step for high-achieving graduates of non-business undergraduate degree programs, the MMgt provides an intensive full-sweep of management fundamentals. Core courses in topics like economics and managerial accounting are complemented by experiential learning that focuses on strategic thinking, business communication and team dynamics. The capstone of the program is an Enterprise Consulting Project in which you will work closely with an organization to develop strategies for business development and solutions to management challenges.
